On October 7, 1828, the bathtub was introduced in England. Celebrate by taking the time today to relax in the tub with a book, while watching your favorite show or just by shutting off your phone and enjoying the quiet! Before you start running the water though, take a minute to read these fun bathtub facts:

- * Marilyn Monroe reportedly bathed in a tub of champagne—it took 350 bottles to fill!
- * On the Titanic, more than 700 third class passengers had to share only two bathtubs.
- * America easily leads the world in bathtubs per capita with many homes having 2 or more bathtubs .
- * A bathtub was installed on the USS Iowa for President Franklin Roosevelt since showering was difficult for him.
- * President Taft was known to get stuck in the White House bath, so he had a tub large enough for four men made.

CHOOSING THE PERFECT BATH TUB FOR YOU

Depending on the look of the bathroom and how often it will be used, choosing a new bath tub can be a very large and personal decision. Everything from the size & shape to the material to the added options make a difference. Here are some of the main considerations when choosing a tub.

Installation: Tubs range from free standing in an open space to replacing your existing tub/shower unit. The layout and design of your bathroom will determine your installation options. The type of faucet you want can also play a role in your tub choice. Installation options include alcove, corner, free standing, claw foot, drop-in and undermount.

Materials: Fiberglass and acrylic are the most common tub materials while cast iron is a traditional choice. Copper is another less common material. Some factors when choosing your material are cost, weight, durability, upkeep and look.

Optional Features: In addition to traditional soaking tubs there are a variety of options and add-ons. Most tub companies offer multiple whirlpool or air systems including massaging jets and in-line heaters. Other options are digital controls, chromotherapy lights and music.

There truly is a tub option out there for everyone! Are you in need of a new bath tub?

WATER FILTRATION AND SOFTENING SYSTEMS

Chlorine and/or chloramines are commonly used to disinfect city water systems and provide safe drinking water to end users. However, once inside homes and businesses these chemicals can cause unintended problems. A good water filtration system can remove these chemicals from your water.

There are also benefits to adding a water softening system to your water including:

- **Protects Plumbing:** Reduces scale build up caused by hard water, which helps extend the life of all your appliances that use water like water heaters, dishwashers, and clothes washers.
- **Saves Energy:** Eliminating scale can improve the efficiency of your water heater by up to 30%!
- **Saves Money:** Cleaning with soft water allows for up to 70% less detergent and other cleaning products to be used.
- **Reduces Spots:** No more spotting on dishes and faucets
- **Cleaner, Healthier-Feeling Bathing:** Bathing in soft water can result in healthier-looking and better-feeling skin. Hair washes and rinses easier and reveals its natural beauty.

For more information on water filtration and softening or to have a free water analysis done, call **Northern Plains Plumbing & Heating** at (701) 222-2155. We offer a complete line of water treatment equipment.

ADAM'S HVAC SERVICE TIP OF THE MONTH
